

## LITTER OBSERVATION AND AUDIT REPORT:

Observe an area on campus and record the litter you see. What kind of litter is the most prevalent on campus? Record the most common litter items you observe (such as straws or soda cans) under the “Types of Litter” column. Follow the plastic spoon example below. Tally the number of items you see of each type of litter and write observations. At the bottom of your sheet, record the details of when/where your audit took place and keep this as a record for future reference.

TYPES OF LITTER	# OF ITEMS	OBSERVATIONS
<b>PLASTIC</b>  Example: plastic spoons	34 spoons found on the ground	Most spoons were thrown on the ground, not opened. From this, one idea is to bring awareness to only taking straws IF you need one with your meal, not all the time.
